

The last five weeks of GAGAL we have made a tow truck, planter box and might make a clock. It really helps us with our measurement and estimation skills.

We have group A and group B, I'm in group B. Sometimes group A goes first and sometimes group B goes first. We both go for about 2hrs.

The teachers who take us to GAGAL are Mr Herman and Mr Mike. Once Mr Mike showed us how to use a lever and a fulcrum. Some Tuesdays Mr Herman or Mr Mike comes to talk with us.

GAGAL always makes sure that we do things safely. Some of the safety equipment are old clothes, safety glasses and closed in shoes. Safety is very important otherwise you could get injured. If you are not on your best behaviour during class you will not go to GAGAL. Mr Herman calls it good GAGAL behaviour.

We have been using machines like a drill press, disc sander, electric drill, electric screwdriver, sander and a belt sander. To stop a drill press you press the big Red button.

When we are measuring you have to be very accurate. Accurate means perfect.

Now that we've been there for a while, I've got quite a lot of confidence. The disc sander and the drill press are the two things I think I'm good at.

At the end sometimes we have to write some things in our GAGAL note pads. We also have GAGAL books which we keep some maths and English in.

When I grow up if I don't become a vet I'll be an electrician. My sister (Kayla) is an apprentice for Rio Tinto. I've had lots of fun and I would like to do it again.
